SUBJECT: DATA

DATE: FEBRUARY 27, 1989

Attached is a listing of seat count and student credit hour data for fall and winter semesters for Secretarial Science and OIS enrollments. I have taken the fall and winter semester figures from each of the printouts that have been provided recently for enrollment comparisons, and totaled those figures up for just fall and winter of each year. I have listed the information by campus and for the College total.

There is some information you should know when looking at this report. All reports are based upon six day counts. Obviously, this causes some problem when we get to fall '87 through winter '89 as late starting classes would be under-subscribed at the time the counts were taken. Further, after talking with Henry Freigruber, I find that using end of semester counts would not be accurate because all student initiated withdrawals are not included in the end of semester counts.

It would appear to me that the only way to accurately account for the actual enrollments to include all second 7 1/2 week, second and third 5 weeks, and 3 week courses that take place during the semester, would be to look at the grade distribution information. However, at this time I do not know if grade distribution includes a distribution for student initiated withdrawals. While the data I'm providing at this point are somewhat inaccurate, there are at least some figures here that can be used for comparisons.
